SOLANA MOBILE · CLOCK IN HACKATHON

NUGSHIP

SINK SHIPS. MINE ORE.

A native Android PvP naval duel for the **Seeker**, where every turn is a live **ORE** mining round and every cannon shot is an ORE deploy.

UNITY 6 · ANDROID APK | MWA + SEED VAULT | ORE v3 ON SOLANA

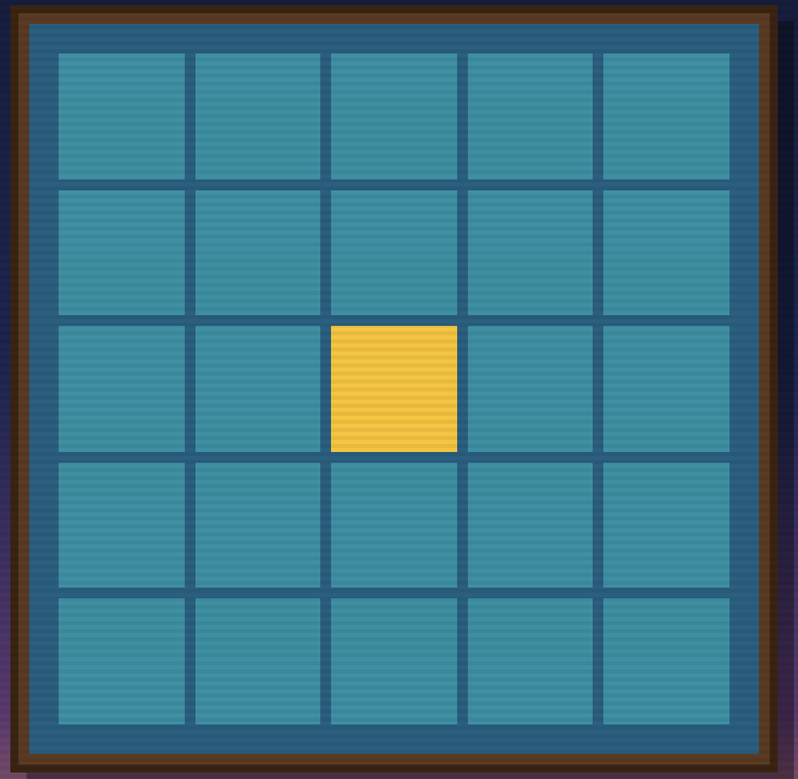

APK ON SEEKER · TITLE (DEV BUILD)

VITTORIO DIFUSCO · SOLO DEV

Mining is passive.

ORE IS ALREADY A GAME... THAT NOBODY PLAYS TOGETHER

- ORE v3 runs a round about every minute: pick squares on a 5X5 grid, deploy SOL, one square wins.
- Today you deploy, then you wait. No opponent, no story, no reason to watch the round land.
- Mobile crypto apps chase “engagement” with points and quests; very few give you a rival.
- On a phone, a popup per transaction kills any real-time game loop.

25 SQUARES. 1 WINS. ...ZZZ

WHAT WE MEASURED (READ-ONLY, 14 MAINNET ROUNDS, OCT 7 2026)

Round start-to-start: 289 slots (≈77 s) · ≈144–152 miners per round · ≈10.3–10.8 SOL deployed per round, spread almost evenly over 25 squares.

Source: our read-only RPC sampling of ORE v3 (timing/FINDINGS.md). Not NUGSHIP metrics.

ORE rounds become a naval duel.

THE 5×5 ORE GRID IS THE BATTLEFIELD

- Squares A1–E5 map 1:1 to ORE's 25 squares.
- Hide a fleet: galleon (3), sloop (2), raft (1). It's sealed as **sha256(layout ‖ salt)**.
- Salvo = ships still afloat (3→1), +1 bonus shot after a sink or a crit.
- Both captains aim, then lock on the **same slot**. Each shot is an ORE deploy on that square.
- The round settles: hits vs hidden fleets, then ORE's winning square.
- A splash can still land on the winning square and mine ORE.

NO PLAYER-VS-PLAYER WAGERING

YOU MINE WITH ORE, NOT AGAINST YOUR RIVAL

PLACE FLEET

AIM & FIRE (APK)

~1 minute, four beats.

1 · AIM

Round opens (240-slot deploy window, ~64 s). Tap enemy tiles; the countdown runs on **slots**, not wall clock.

2 · LOCK

Both players' targets lock at **end_slot - 20** (auto-fire). No peeking: the server only says how many squares the rival picked.

3 · FIRE

Session key sends **Checkpoint(prev) + Deploy(mask)** in one tx before end_slot. One approval per match.

4 · REVEAL

~48-slot intermission (~13 s), ORE resets, winning square = slot-hash mod 25. Your waters, then theirs.

EVERY SHOT HAS ONE OF FOUR OUTCOMES

	NOT ORE WINNER	ORE WINNING SQUARE
MISS	Splash	Splash + gold bubbles (ORE mined)
HIT	Explosion + fire	CRITICAL HIT · nugget burst · Nuggy dances

Motherlode (1 in 500 rounds) = **THE KRAKEN RISES.**

CRIT (MOCKUP)

KRAKEN (MOCKUP)

Built for the phone in your hand.

ONE APPROVAL PER MATCH

Seed Vault approves once. That funds an ORE Automation budget with an in-app session key as executor, so there are no per-turn popups. Manual per-shot signing is the fallback.

PORTRAIT-FIRST PIXEL ART

240X534 logical canvas at exactly 5X = Seeker's 1200X2670. One-thumb aiming, big FIRE button, haptics.

MOBILE WALLET ADAPTER

MWA via Solana.Unity-SDK for connect, Sign-In With Solana profile pairing, and signing.

NATIVE, NOT A WRAPPER

Unity 6000.3 · IL2CPP · ARM64 · minSdk 26. Runs on a Seeker today (dev build).

PVP 1V1 · QUICK MATCH / INVITE CODE

ORE is the game clock.

- **Every turn** is a live ORE v3 round (program oreV3EG1…ULvWv).
- **Every shot** is a real Deploy on that square, the same amount per square, bundled with Checkpoint of the prior round.
- **Crit** = hit on ORE's winning square. **Kraken** = Motherlode.
- **ORE mined**, crits and Kraken sightings sit on the leaderboards next to wins.
- ORE is the only on-chain product in the game. There is no in-game token, NFT or tradeable item.

WHAT A MATCH CAN DRIVE INTO ORE [ARITHMETIC CEILING, NOT A METRIC]

Up to 4 shots/turn (3 + bonus) × 15-turn cap = ≤60 square-deploys per player per match. At the default 0.005 SOL/shot, that's ≤0.3 SOL per player per match. Two new ORE miners per duel.

STATUS · HONEST

WORKS server follows live mainnet ORE rounds (read-only): real round IDs, slot clock, winning square.

WORKS Deploy/Checkpoint/Automate builders, byte-checked vs mainnet fixtures (36/36 server tests pass).

GATED live deploys sit behind a hard compile-time gate (LIVE_ORE=false) until the owner approves a mainnet test.

Nobody can move their fleet.

COMMIT → PLAY → REVEAL

- Each phone seals its layout: sha256(layout[25] || salt[32]), with a fresh salt per match.
- Both commits are exchanged before turn 1.
- At match end both layouts + salts are revealed and **verified on the phone**. A mismatch flags the match.
- Shared test vector checked in both TypeScript and C# tests.

THE REFEREE READS THE CHAIN

A shot only counts if that square has ≥ stake deployed in that round **and** was locked. The server reads the player's ORE Miner PDA right after end_slot (DeployEvent logs as fallback). It never signs or sends a transaction.

ARCHITECTURE

SEEKER · UNITY APK
game · fleet commit · session key
MWA ⇄ Seed Vault

SOLANA MAINNET
ORE v3 program
Board · Round · Miner PDAs

phone ⇄ server: wss JSON · phone → chain: Checkpoint + Deploy · server ← chain: read-only RPC

NUGSHIP SERVER · NODE/TS · WS · SQLITE
matchmaking · Elo · commit-reveal referee · ORE round follower · leaderboards. Never signs.

Simultaneous lock on the same slot · aims hidden until lock · reveal never leaks unsunk ship cells · 90 s reconnect grace · turn_void if ORE stalls.

A reason to come back every tide.

THE LOOP

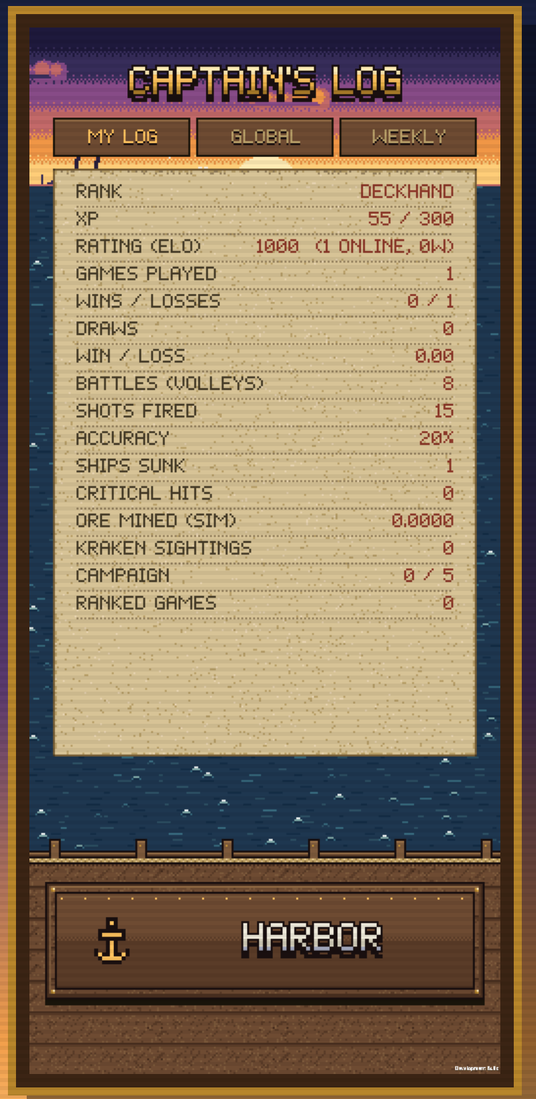

- **Daily Tide:** a date-seeded daily challenge.
- **Ranked 1v1** with Elo, plus invite codes to duel friends.
- **Leaderboards**, global + weekly: games, W/L, ratio, battles, Elo.
- **Captain's log** writes up your first sink, crits and Kraken sightings.
- **Veteran marks:** ships that win keep their battle scars.

RANK UNLOCKS A FLEET (COSMETIC ONLY)

Driftwood → Merchant Cog → Pirate Brig → Navy Frigate → Ironclad → Ghost Fleet → **Motherlode** (needs a Kraken sighting). Same hulls and hitboxes for everyone. XP is earned, never sold.

7 RANK FLEETS (ART)

CAPTAIN'S LOG (APK)

Captains, seas and a ship's cat.

SOLO CAMPAIGN (APK)

5 AI CAPTAINS, 5 TACTICS

- Barnacle: random hunter
- Admiral Brine: checkerboard parity
- Mad Molly: centre-biased
- Ghost Captain: probability density
- Kraken Cult (boss): +1 shot per volley

NUGGY, THE SHIP'S CAT

Black cat, orange eyes, bandana with a gold ORE emblem. Cheers on hits, dances on crits, winces when you're hit. A mascot only: no token, no ticker.

6 BIOMES · DAY/NIGHT · WEATHER

Original retro nautical chiptune score: title waltz, layered battle music that tenses as the lock nears, Kraken theme.

Shipped vs. gated.

AREA	STATE
Native APK on Seeker	WORKS dev build runs on device
Server-driven matches (solo, quick match, invite codes)	WORKS local server; Fly.io deploy prepared, not yet live
Live ORE round clock + winning square	WORKS read-only mainnet RPC
Commit-reveal + on-chain referee	WORKS unit + end-to-end sim tests
MWA connect / profile creator	WORKS SIWS pairing built, switched off
Real ORE deploys from the phone	GATED LIVE_ORE=false until the owner OKs a mainnet test

RESULTS + FLEET VERIFY

We don't quote user numbers: the game isn't public yet. Everything above is checkable in the repo.

Charting the course.

NOW · OCT 2026

- Hackathon build
- Hosted server (wss)
- First live-ORE mainnet test round

NEXT · NOV 2026

- Release-signed build
- Solana dApp Store listing
- Live ORE ranked, opt-in
- Privacy policy + account deletion

THEN · Q1 2027 [PLAN]

- 2v2 fleets
- Guilds / crews
- Seasons + weekly ladders

LATER [PLAN]

- Tournaments on ORE rounds
- Spectator mode for Kraken rounds
- More captains & seas

ORE stays the featured on-chain product throughout. If we win the ORE prize, we'll agree milestones with ORE and post progress updates with real usage numbers as we hit them.

One captain. One cat.

VITTORIO DIFUSCO · SOLO DEVELOPER

- Design, Unity client, Node server, ORE integration, pixel art pipeline, chiptune score.
- Independent: no VC or angel funding.
- Repo: [GITHUB_URL] · Demo: [VIDEO_URL] · X: [X_HANDLE]

NUGGY SAYS THANKS

SINK SHIPS. MINE ORE.
